SUBJECT:

OIL FILTERS

MODELS:

ALL

We would like to remind all concerned of the importance of fitting the correct replacement oil filters. A few cases have been reported where a Purolator Type PC-23 oil filter has been used on the MGB and Marina engines, with catastrophic results. This filter is definitely not suitable for these models due to the internal construction of the filter itself, and, if used, major engine damage will occur.

The correct filters are as follow:

<u>Model</u>	<u>Purolator No.</u>
Midget	GFE-139
MGB	GFE-114
Marina	GFE-114
